NATIONAL TECHNICAL ASSESSMENT ITB-KOT-2020/1115 1st edition

This National Technical Assessment has been issued in accordance with the Regulation of the Minister of Infrastructure and Construction of 17 November 2016 on national technical assessments (Journal of Laws of 2016, item 1968) by Instytut Techniki Budowlanej in Warsaw, at the request of:

**ARVEX Grobelny Sp. z o.o.
ul. Makuszyńskiego 4, 30-969 Kraków**

The National Technical Assessment ITB-KOT-2020/1115 1st edition is a positive assessment of the performance of the following construction products for their intended use:

ARVEX plastic and metal expansion fasteners

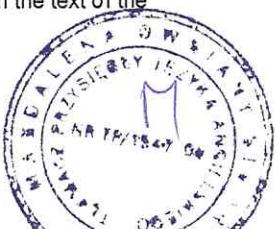

Expiry date of the National Technical Assessment:

27.03.2025

DIRECTOR
of Instytut Techniki Budowlanej
D.Eng Robert Geryło

Warsaw, 27.03.2020

The National Technical Assessment document ITB-KOT-2020/1115 1st edition contains 41 pages, including 3 appendices. The content of this document can only be copied in full. Publication or circulation in any other form of extracts from the text of the National Technical Assessment requires written agreement with Instytut Techniki Budowlanej.

Instytut Techniki Budowlanej
ul. Filtrowa 1, 00-611 Warsaw

1. TECHNICAL DESCRIPTION OF THE PRODUCT

The subject of this National Technical Assessment is ARVEX plastic and metal expansion fasteners, manufactured by ARVEX Grobelny Sp. z o.o., ul. Makuszyńskiego 4, 30-969 Kraków, at its manufacturing plant in Kraków.

- This National Technical Assessment covers the product types specified by the manufacturer, resulting from the performance characteristics given in section 3.

The components of ARVEX expansion fasteners are plastic sleeves and steel cores (screws). The range and dimensions of the ARVEX expansion fasteners are shown in Fig. A1-A68 and listed in tables A1-A18. Fixing with ARVEX expansion fasteners is shown in Figures B1 and B2.

ARVEX expansion fastener sleeves with designations: A, AG, KARS, AL and KARL are made from polyamide PA6, a virgin material characterised by a differential scanning calorimetry (DSC) curve according to PN-EN ISO 11357-1:2016, which conforms to the standard established by the National Technical Assessment procedure.

ARVEX expansion fastener sleeves with designations: AT and AGT are made of polypropylene (PP), a virgin material characterised by a differential scanning calorimetry (DSC) curve according to PN-EN ISO 11357-1:2016, which conforms to the standard established by the National Technical Assessment procedure.

The expansion cores of the ARVEX expansion fasteners are made of galvanised ordinary carbon steel with a yield strength of not less than 340 MPa and a tensile strength of not less than 420 MPa, with a mechanical property class of not less than 4.8 according to PN-EN ISO 898-1:2013. The fasteners are coated with an electrolytic zinc coating with a thickness of not less than 5 µm, according to PN-EN ISO 4042:2018.

ARVEX plastic and metal expansion fasteners can be used with the EASA plastic masking cap (Figures A18 and A65) and with an N steel nut and EAUM plastic nut (Figures A19, A66 and A67).

The dimensional tolerances of the fasteners correspond to tolerance class *m* according to PN-EN 22768-1:1999.

2. INTENDED USE OF THE PRODUCT

ARVEX expansion fasteners are designed for non-structural multi-point fixings of statically loaded building components, in substrates made of:

- normal concrete of a class not lower than C20/25, according to PN-EN 206+A1:2016,
- full solid bricks , according to PN-EN 771-1+A1:2015, with a compressive strength of not less than 20 N/mm² (class not lower than 20),
- ceramic hollow bricks, according to PN-EN 771-1+A1:2015, with a wall thickness of not less than 10 mm and a compressive strength of not less than 15 N/mm² (class not lower than 15),

- autoclaved aerated concrete elements, according to PN-EN 771-4+A1:2015, with a compressive strength of not less than 2.0 N/mm² (class not less than 2) and a gross density in the dry state of not less than 350 kg/m³.

Due to the corrosive aggressiveness of the environment, ARVEX expansion fasteners should be used in accordance with the requirements given in PN-EN ISO 12944-2:2018, PN-EN ISO 9223:2012 and PN-EN ISO 2081:2018.

To determine the design resistance of ARVEX expansion fasteners to pull-out from a concrete substrate, divide the characteristic pull-out resistance given in Appendix C by a safety factor of 1.8.

To determine the design resistance of ARVEX expansion fasteners to pull-out from a clay substrate, divide the characteristic pull-out resistance given in Appendix C by a safety factor of 2.5.

To determine the design resistance of the ARVEX expansion fasteners to pull-out from an autoclaved aerated concrete substrate, divide the characteristic pull-out resistance given in Appendix C by a safety factor of 2.0.

To determine the design shear resistances of ARVEX expansion fasteners, divide the characteristic shear resistances given in Appendix C by a safety factor of 1.25.

Parameters for the installation and placement of ARVEX expansion fasteners in the substrate are given in Appendix B.

To fit the ARVEX expansion fasteners, a hole is drilled in the substrate and a plastic sleeve is fitted therein. A steel screw is then screwed into the sleeve, causing the body to be pressed against the inner surface of the hole and creating a permanent anchorage for the fastener.

ARVEX expansion fasteners should be used in accordance with the technical design, developed taking into account Polish building standards and regulations, the findings of this National Technical Assessment and the manufacturer's instructions regarding the conditions for fixing with the above mentioned fasteners.

3. PRODUCT PERFORMANCE AND THE METHODS USED TO ASSESS IT

3.1. Product performance

3.1.1. Characteristic resistance of fastener fixings. The values of characteristic resistance of the ARVEX expansion fasteners to pull-out and shear is given in Appendix C.

3.1.2. Fastener durability. A zinc coating of not less than 5 µm on the steel cores ensures the durability of the fasteners in accordance with section 2.

3.2. Methods used to assess performance

3.2.1. Characteristic resistance of fastener fixings. Testing of the characteristic resistance of the ARVEX expansion fasteners is carried out in accordance with ETAG 020:2012, on fasteners embedded in the substrate described in Annex C.

3.2.2. Fastener durability. Testing of the thickness of the zinc coating is carried out according to PN-EN ISO 2178:2016 or PN-EN ISO 3497:2004.

4. PACKAGING, TRANSPORT AND STORAGE, AND LABELLING OF THE PRODUCT

ARVEX expansion fasteners should be supplied in sets and stored and transported in such a way as to ensure that their technical properties remain unchanged.

The method of marking products with the construction mark should be consistent with the Regulation of the Minister of Infrastructure and Construction of 17 November 2016 on the method of declaring the performance of construction products and the method of marking them with the construction mark (Journal of Laws of 2016, item 1966, as amended).

The marking of the product with the construction mark should be accompanied by the following information:

- the last two digits of the year in which the construction mark was first placed on the construction product,
- the name and address of the registered office of the manufacturer or an identification mark enabling the name and address of the registered office of the manufacturer to be clearly identified,
- the name and designation of the construction product type,
- the number and year of issue of the National Technical Assessment according to which the performance was declared (ITB-KOT-2020/1115 1st edition),
- the number of the National Declaration of Performance,
- the level or class of performance declared,
- the name of the certification body involved in the assessment and verification of constancy of performance of the construction product,
- the website address, if the national declaration of performance is made available thereon.

A safety data sheet and/or information on hazardous substances contained in a construction product, as referred to in Article 31 or 33 of Regulation (EC) No 1907/2006 of the European Parliament and of the Council concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), establishing a European Chemicals Agency, should be provided or made available, as appropriate, together with the national declaration of performance.

In addition, the labelling of a construction product that constitutes a hazardous mixture according to REACH should comply with the requirements of Regulation (EC) No 1272/2008 of the European Parliament and of the Council on classification, labelling and packaging of substances and mixtures, amending and repealing Directives 67/548/EEC and 1999/45/EC, and amending Regulation (EC) No 1907/2006.

5. ASSESSMENT AND VERIFICATION OF CONSTANCY OF PERFORMANCE

5.1. National system of assessment and verification of constancy of performance

In accordance with the Regulation of the Minister of Infrastructure and Construction of 17 November 2016 on the method of declaring the performance of construction products and the method of marking them with the construction mark (Journal of Laws 2016, item 1966, as amended), the 2+ system of assessment and verification of constancy of performance applies.

5.2. Type testing

The performance characteristics assessed in section 3 constitute type testing of the product as long as there are no changes to raw materials, components, production line or facility.

5.3. Factory production control

The manufacturer shall have a factory production control system in place at the production facility. All the elements of the system, requirements and provisions adopted by the manufacturer shall be documented in an ongoing manner in the form of policies and procedures, including records of tests performed. The factory production control shall be adapted to the production technology and ensure that the declared performance of the product is maintained in series production.

The factory production control includes specification and testing of raw materials and components, inspection and testing in the manufacturing process as well as control tests (according to section 5.4), carried out by the manufacturer in accordance with the established test plan and according to the principles and procedures set out in the factory production control documentation.

The results of production control shall be systematically registered. The records of the register shall confirm that the products meet the criteria for assessment and verification of constancy of performance. Individual products or batches of products and their associated manufacturing details shall be fully identifiable and reproducible.

5.4. Control tests

5.4.1. Test programme.

The test programme includes:

- a) ongoing tests,
- b) periodic tests.

5.4.2. Ongoing tests.

Ongoing tests include checking:

- a) the shape and dimensions,
- b) the thickness of the zinc coating.

5.4.3. Periodic tests.

Periodic tests include checking the characteristic resistance of the fasteners.

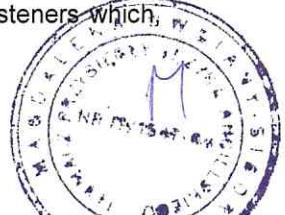

5.5. Testing frequency

Ongoing tests should be carried out in accordance with the agreed testing plan, but not less frequently than for each batch of products. The batch size should be specified in the factory production control documentation.

Periodic tests should be performed at least once every three years.

6. DISCLAIMER

6.1. The National Technical Assessment ITB-KOT-2020/1115 1st edition is a positive assessment of the performance of those essential characteristics of ARVEX plastic and metal expansion fasteners which

according to the intended use resulting from the provisions of the Assessment, affect the compliance of the construction works in which the product will be used with the basic requirements.

6.2. The National Technical Assessment ITB-KOT-2020/1115 1st edition is not a document authorising the marking of a construction product with a construction mark.

According to the Act on construction products of 16 April 2004 (Journal of Laws of 2020, item 215), products covered by this National Technical Assessment may be marketed or made available on the domestic market if the manufacturer has assessed and verified the constancy of performance, prepared a national declaration of performance in accordance with the National Technical Assessment ITB-KOT-2020/1115 1st edition and labelled the products with the construction mark, in accordance with the applicable regulations.

6.3. The National Technical Assessment ITB-KOT-2020/1115 1st edition does not infringe the rights arising from the provisions on industrial property protection, in particular the Act of 30 June 2000 – Industrial Property Law (Journal of Laws of 2017, item 776, as amended). It is the responsibility of the users of this ITB's National Technical Assessment to ensure these rights.

6.4. ITB, in issuing the National Technical Assessment, assumes no liability for possible infringement of exclusive and acquired rights.

6.5. The National Technical Assessment does not relieve the manufacturer of the products from the responsibility for their proper quality and the construction contractors from the responsibility for their correct application.

6.6. The validity of the National Technical Assessment may be renewed for successive periods not exceeding 5 years.

Appendix B.

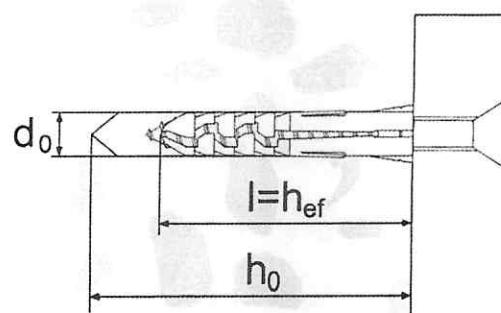

Figure B1. Installation parameters for ARVEX expansion fasteners consisting of steel cores and A, AT, AG, AGT and KARS plastic sleeves

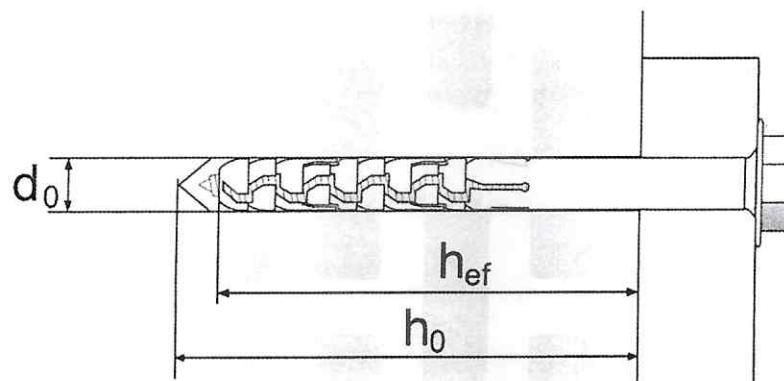

Figure B2. Installation parameters for ARVEX expansion fasteners consisting of steel cores and KARL and AL plastic sleeves

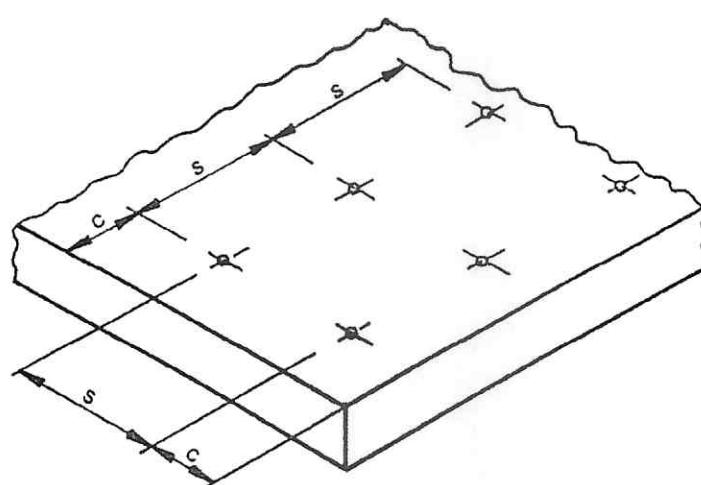

Figure B3. Placement parameters of ARVEX expansion fasteners in the substrate
 s - axial spacing of the fasteners, c - distance of the fastener from the edge of the substrate

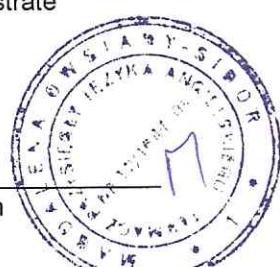

Table B1. Installation and placement parameters for ARVEX expansion fasteners consisting of steel cores and A, AT, AG, AGT and KARS plastic sleeves

Item	Parameter	A / AT / AG / AGT / KARS plastic sleeve diameter, mm						
		5	6	8	10	12	14	16
1	2	3	4	5	6	7	8	9
1	Maximum hole diameter d_0 , equal to nominal drill diameter d_{nom} , mm	5	6	8	10	12	14	16
2	Minimum drill hole depth h_0 , mm	35	40	50	60	70	80	90
3	Effective fastenerage depth of fastener h_{ef} , mm	25	30	40	50	60	70	80
4	Minimum fastener spacing s , mm	$2 \times h_{ef}^{1)} / 3 \times h_{ef}^{2)}$						
5	Minimum distance of fastener from edge of substrate c , mm	$2 \times h_{ef}$						
6	Minimum substrate thickness h , mm	$1.5 \times h_{ef}$ but not less than 80						

¹⁾ for concrete substrate²⁾ for other substrates**Table B2.** Installation and placement parameters for ARVEX expansion fasteners consisting of steel cores and AL and KARL plastic sleeves

Item	Parameter	AL / KARL plastic sleeve diameter, mm						
		6	8	10	12	14	16	
1	2	3	4	5	6	7	8	
1	Maximum hole diameter d_0 , equal to nominal drill diameter d_{nom} , mm	6	8	10	12	14	16	
2	Minimum drill hole depth h_0 , mm	65	75	80	95	100	130	
3	Effective fastenerage depth of fastener h_{ef} , mm	55	65	70	85	90	120	
4	Minimum fastener spacing s , mm	$2 \times h_{ef}^{1)} / 3 \times h_{ef}^{2)}$						
5	Minimum distance of fastener from edge of substrate c , mm	$2 \times h_{ef}$						
6	Minimum substrate thickness h , mm	$1.5 \times h_{ef}$ but not less than 80						

¹⁾ for concrete substrate²⁾ for other substrates

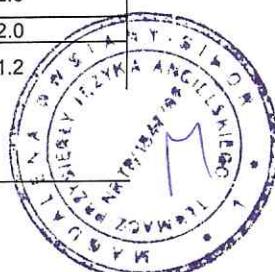

Appendix C.

Table C1. Characteristic resistance of ARVEX expansion fasteners to pull-out $N_{R,k}$ and to shear $V_{R,k}$
